Hey Alec,

Thanks again for taking the time to catch up on the water report. I've attached a few files here that might help flesh things out a bit more:

Water Use Data

- The "*FINAL_Metro_FullBreakdown_85_10*" file should have most everything you need, including metro/non-metro water use totals by each category going back to 1985. I've preserved the county geography in case you're interested. The per capita columns might also be worth examining.
 - o For a quick lookup of the category headings, see the "*USGS Category Descriptions*" file.
- The "*FINAL_MSA_Compare_Summary*" is a helpful aggregation of the metro and non-metro totals for all of these years.
 - o Note that the "top metro" and "small metro" classifications both fall under the "all metro totals," while the "micro area" and "rural" classifications fall under the "non-metro totals"
- The "*FINAL_2010_State_Analysis*" file includes state-by-state breakdowns for metro and non-metro regions, respectively, if you happen to find use for them.

Water Use Models

- The final results can be found in the "*Water Use Regression Tables - v3*" word document. If you want the raw results, look at the "*Tot_Water_Results*" and "*Res_Water_Results*" Excel files.
- For the full variable lists by county, you can look at the "*Tot_WaterUse_Model_v3*" and "*Dom_WaterUse_Model_v3*" files.

Let me know if you run into any questions or would like to catch up on anything else. I'll let you know once I have a draft to share of the report itself. Again, I'm targeting a mid-May initial draft and an early June handoff.

Joe
